

Remove Sensitive Data from Testing & Development

Are testers and developers at your organisation **using sensitive data in less-secure test environments?** This avoidable practice risks data breaches, threatens compliance, and increases your attack surface.

Avoid Security & Compliance Risks

Enterprise Test Data automatically removes sensitive data before it reaches test systems, while providing testers and developers with all the data they need - faster, and at less cost to your business.

Identify Legislative Risks

Data Profiling automatically identifies personally and commercially sensitive information in your data, flagging it for removal before provisioning.

Remove The Threats - Keep The Utility

Data Masking replaces sensitive information in test data copies, while retaining the realism needed for engineering and ML training.

Synthetic Data Generation creates realistic data for every test and development scenario, without the sensitive contents.

Operationalise & Stay Ahead

Self-Service Data provides engineers and tools with up-to-date data on demand, anonymising new data as it enters your systems.

Every activity in Enterprise Test Data is **auditable and centralised**, so you can demonstrate compliance in your testing and development.

Test Data Compliance & Security

Global 2000 enterprises trust Enterprise Test Data to remove sensitive data from their non-production environments, while unlocking cost savings and quality gains throughout testing and development.

Mask Data for **Legislative Compliance**

A Large Insurance Company

Mask sensitive data in their test databases to support **compliance** with the EU General Data Protection Regulation.

Synthetic Data Removes Security Risks

A Top 10 Central Bank

Generate synthetic messages to test a new payment platform, removing sensitive data in non-production and **saving 97% in initial data creation cost.**

Unlock ROI **Across Testing and Development**

A Global 100 Financial Institution

Saved \$2 million in test data provisioning costs during their first year, with 400 users **saving the equivalent of 50 weeks' time every week.**
